

## For Original GreenStar® or GreenStar 2®

When you start your engine does your GreenStar have “bootup” issues, such as?

- AutoTrac will not engage
- No differential correction
- Moisture sensor error

### Road and Transporting Safety ...

Does the light from your GreenStar distract your vision for on-coming traffic? Is the alarm intermittently going off while transporting causing you to take your eyes off the road? Would you simply like to turn the GreenStar off when not in use – or going down the road?

### GreenStar Reboot ...

Would you like the ability to reboot your GreenStar without turning off the engine or unplugging the GreenStar cable?

### Ag Express has a solution for these issues:

The GreenStar Power Remote (GPR) is installed in-line with the GreenStar display harness and allows you to turn off the display before starting the engine (preventing bootup problems). Once the engine is up and running you can turn on the power switch of the GPR which supplies power for the display to bootup correctly.

In addition if night time display glare, or the audio alarm is an issue – you simply turn off the GPR which will cut power to the GreenStar display while transporting your equipment.

If you find that you need to reboot your GreenStar at anytime simply turn the GPR off and back on to execute a system reboot.

There are no installation difficulties with the GPR, because it simply installs in-line with the standard GreenStar harness. If you are interested in additional information, or to order, simply contact your nearest Ag Express location.

**The Ag Express GPR (patent pending) \$210**
